

PathFinder — 5-Minute Demo Video Script

Target length: 4:45 – 5:00 (leave 10s buffer)

Resolution: 1920×1080 (primary) — also capture 390×844 B-roll if time permits

Stack: Production only — `npm run build` + `next start` on :3002, API on :8000

Theme: Dark (primary); show Light toggle once (~5 seconds)

Role for demo: AI/ML Engineer (Judge demo path)

Pre-Recording Checklist

- ☐ Docker Postgres running; seed complete
- ☐ Backend: `uvicorn app.main:app --port 8000`
- ☐ Frontend: `PORT=3002 npm run start` (NOT `next dev`)
- ☐ Browser zoom 100%; no bookmarks bar
- ☐ Close unrelated tabs; disable notifications
- ☐ Optional: `PATHFINDER_AI_API_KEY` set for live Groq explanations (stub works if not)
- ☐ Practice once with **Judge demo** (~90s) button to learn timing

ON-SCREEN TEXT CARDS (optional, 3 seconds each)

Use simple title cards between sections if not recording voiceover live:

1. "Evidence → Diagnosis → Adaptation"
2. "Not a course list — a competency engine"
3. "Path V1 → Path V2 — frozen work preserved"

SCRIPT

[0:00 – 0:25] HOOK — The Problem

SCREEN: Title card or slow zoom on onboarding hero — "Build the path to the career you want."

VOICEOVER:

"Most career platforms recommend courses from keywords. They don't tell you what you're actually missing, why a resource comes *now*, or how your plan should change when you pass an assessment.

PathFinder is different. It's an evidence-driven intelligence system: **Evidence → Diagnosis → Adaptation.**"

ACTION: None yet — let thesis land.

[0:25 – 1:10] ONBOARDING — Goal + Career + Evidence

SCREEN: Onboarding step 0 — goal field.

VOICEOVER:

"A learner starts with a natural-language goal — not a dropdown."

ACTION: Type (or paste quickly):

"I want to become a machine learning engineer focused on computer vision."

Click **Resolve goal**.

VOICEOVER (as UI resolves):

"PathFinder interprets the language, but the **ontology decides** what's real. Here — resolved to AI/ML Engineer, matched to our canonical career graph."

ACTION: Click **Pick career manually** OR continue if already resolved → select **AI/ML Engineer** if needed.

Click **Continue** through profile steps. On evidence step, ensure **demo evidence** toggle is ON.

VOICEOVER:

"We fuse self-reported skills with structured evidence. **Unknown doesn't mean zero** — it means no proof yet."

ACTION: Click **Judge demo** (~90s) OR **Build my path** → wait for workspace.

[1:10 – 1:50] DASHBOARD — Diagnosis

SCREEN: Workspace dashboard.

VOICEOVER:

"This is **KNOW** and **DIAGNOSE**. The dashboard shows destination role, diagnosed gaps, and the next action — all from the backend gap engine, not the UI guessing."

ACTION: Scroll slowly through: - Goal text - Gap / competency rows (point at UNKNOWN vs GAP states)
- "What to do next"

Click **Continue** to Blockers if footer visible, or navigate via mobile/desktop nav.

VOICEOVER:

"Blockers aren't vague — they name the prerequisite chain. You can't skip proof."

ACTION: Briefly show Blockers screen (5–8 seconds).

[1:50 – 2:25] MY PATH — Sequencing + WHY

SCREEN: My Path tab.

VOICEOVER:

"The path isn't a playlist. It's a **dependency-aware route** — executable, waiting, or blocked."

ACTION: Scroll path. Click **WHY THIS RESOURCE** on one item.

VOICEOVER:

"Every recommendation is auditable. Gap, role relevance, prerequisites, intervention — then optional grounded AI explains the facts. The AI **cannot** change your score or reorder the path."

ACTION: Close drawer. If an executable item shows progress actions, glance at Complete / Struggled / Skip (don't submit yet).

[2:25 – 3:15] ASSESSMENT — Prove It

SCREEN: Assessments tab.

VOICEOVER:

"Proof enters the system through canonical assessments — tied to skills in the ontology."

ACTION: Click **Prove this skill** → answer questions (click through at steady pace) → **Submit**.

VOICEOVER (during “Updating competency model” if shown):

“Assessment evidence fuses into the competency model. Diagnosis updates.”

ACTION: Land on **Result** screen. Pause 2 seconds on diagnosis shift.

VOICEOVER:

“The result isn’t a badge — it’s a **diagnosis change** that can trigger adaptation.”

[3:15 – 4:15] ADAPTATION — Path V1 → V2 (HERO MOMENT)

SCREEN: Result → click **See what changed / What changed**.

VOICEOVER:

“This is PathFinder’s signature moment: **Path V1 becomes Path V2**.”

ACTION: Let cascade animation play (or click Skip if practiced). Show: - Added / moved / blocked items
- **Frozen completed work** (call out explicitly) - FLIP animation on route if visible

VOICEOVER:

“Completed work is **frozen** — we never steal credit when the plan adapts. New evidence reshapes what’s ahead, not what you’ve already proven.”

ACTION: Click **Why this changed** (8–10 seconds on adaptation trace).

VOICEOVER:

“Forensic transparency: what changed, why, and which skill drove it.”

[4:15 – 4:40] SKILL MAP + AI + CLOSE

SCREEN: Quick montage (5–7 sec each):

1. **History** — version timeline
2. **Skill Map** — select one skill, show blocker neighborhood
3. **Ask PathFinder** — one question, show grounded response

4. Theme toggle — Light mode flash (optional, 3 sec)

VOICEOVER:

“History versions every adaptation. The skill map shows dependency truth. Ask PathFinder explains — it doesn’t decide.
Under the hood: deterministic fusion, gap engine, sequencing, and adaptation — **twenty out of twenty** on our intelligence benchmark. Optional semantic retrieval and Groq explanations sit on top — they don’t replace the engine.”

[4:40 – 5:00] CLOSING CARD

SCREEN: GitHub URL + thesis text.

ON-SCREEN TEXT:

PathFinder
Evidence → Diagnosis → Adaptation

github.com/shriansh1625/hcl_pathfinder
HCLTech AMPlified · Round 2

VOICEOVER:

“PathFinder — evidence-driven career intelligence. Clone it, run it, break it — the proofs are in the repo. Thank you.”

FADE OUT.

TIMING SUMMARY

Segment	Duration	Cumulative
Hook	0:25	0:25
Onboarding	0:45	1:10
Dashboard + Blockers	0:40	1:50
Path + WHY	0:35	2:25
Assessment + Result	0:50	3:15

Segment	Duration	Cumulative
V1→V2 + Why changed	1:00	4:15
Montage + close	0:45	5:00

B-ROLL CUTS (if main take runs long)

Trim in this order: 1. Blockers screen (keep dashboard gaps) 2. Skill Map (keep History) 3. Light theme toggle 4. Ask PathFinder (keep one grounded AI line in voiceover without full UI)

Never cut: Assessment → Result → Path V2 → frozen work callout.

VOICEOVER TIPS

- Speak at **~140 words/minute** — script is ~680 words for 5 minutes
- Emphasize: “ontology decides,” “unknown not zero,” “frozen work,” “AI explains doesn’t control”
- Avoid: “AI plans your career,” “chatbot recommends courses,” “100% ready”

YOUTUBE UPLOAD NOTES

- **Title:** PathFinder — Evidence-Driven Career Intelligence | HCLTech AMPLified Round 2
- **Description:** Include GitHub link + one-line thesis + timestamps
- **Visibility:** Unlisted or Public per team preference
- **Length:** YouTube accepts 3–5 min; aim for **4:50**
